Deleted: Previously presented

Claim 52. (Currently amended) A method of processing voice packets received
over a packet network, the method comprising:
Receiving, at a communication device, digital voice data packets communicated
via the packet network, each of the digital voice data packets comprising digital voice
data and an associated group identifier;
queuing the digital voice data from the received digital voice data packets;
monitoring the group identifier associated with the queued digital voice data to
detect a change in group identifier;

stopping the processing of queued digital voice data in the communication device for a predetermined amount of time, when a change in group identifier is detected; and continuing processing of queued digital voice data, otherwise.

Claim 68. (Currently amended) A method of processing voice for communication over a packet network, the method comprising:
